

Test Plan Implementation

Due Jul 25 by 11:59pm **Points** 100 **Submitting** a text entry box or a file upload
Available Jul 15 at 12am - Jul 28 at 11:59pm 14 days

This assignment was locked Jul 28 at 11:59pm.

Project Requirements

You are to update the program from the review assignment. The program should read a Test Suite from a text file. Instead of just writing the results of the test to the screen, the program should write the test results to text file. Your test data should include instances that will produce successful tests and instances of data that will produce unsuccessful tests.

Upload the following artifacts:

1. A copy of your test plan
2. A copy of your IntelliJ project folder as a compressed zipped file. Make sure to include the data file containing test data that is placed in your project folder
3. A copy of your Lab Report

In the automated testing assignment, please make sure you package and reference any project resources in the project folder. This means to place and reference your data file containing your testing suite inside your project folder. If you are creating an output text file containing your testing results, please create it in your project folder as well

You can reference the file in the project folder using relative addressing. Remember, since the starting point of the project is the folder, you only have to reference the file by its name. You do not have to provide and path information unless you place the file in a folder within the project folder. For this assignment that will not be necessary

```
File file = new File("filename.txt")
```

I do not want to have to place any text files in any locations. I should be able to download, unzip, and run the project without any additional activity. The project should access, read, and write the text files from within the project folder.
